

# Contents

<b>1</b>	<b>Symbolic Calculations</b>	<b>9</b>
<b>2</b>	<b>Numerical Evaluations</b>	<b>15</b>
2.1	Taylor Polynomial Approximation . . . . .	15
2.2	Power Series . . . . .	17
2.3	Alternating Series . . . . .	17
2.4	How to evaluate $\sin(x)$ . . . . .	18
2.5	How to evaluate $\pi$ . . . . .	19
2.6	How to evaluate $e^x$ . . . . .	20
2.7	How to evaluate $\log(x)$ . . . . .	21
2.8	How to evaluate $\tan^{-1}(x)$ . . . . .	22
2.9	How to evaluate $\sqrt{x}$ . . . . .	23
<b>3</b>	<b>Interpolations in 1D</b>	<b>25</b>
3.1	Polynomial Interpolation . . . . .	25
3.1.1	Lagrange Form . . . . .	28
3.1.2	Newton Form . . . . .	29
3.1.3	Divided Differences . . . . .	29
3.1.4	Example : Smooth Data . . . . .	35
3.1.5	Example : Non-smooth Data . . . . .	36
3.2	Stable Interpolation #1: Cubic Spline Interpolation . . . . .	37
3.3	Stable Interpolation #2 : ENO Interpolation . . . . .	44
3.4	Stable Reconstruction : Least Square Fitting . . . . .	45
<b>4</b>	<b>Interpolations in Multi-Dimensions</b>	<b>49</b>
4.1	Polynomial Interpolation on Uniform Grids . . . . .	49
4.2	RBF Interpolation on Scattered Data . . . . .	50
<b>5</b>	<b>Numerical Linear Algebra : Basic Theory</b>	<b>57</b>
5.1	Gaussian Elimination Method : LU Factorization . . . . .	57
5.2	Gaussian-Elimination with Pivoting : PA=LU . . . . .	59

5.3	Gram-Schmidt Orthogonalization : QR Factorization . . . . .	62
5.4	Converting Linear System into Symmetric Positive Definite Linear System .	65
5.5	Steepest Descent . . . . .	65
5.6	Conjugate Gradient . . . . .	68
5.7	Solving General Linear System : CGNR . . . . .	70
5.8	Solving General Linear System : Bi-CG . . . . .	70
5.9	Power Method . . . . .	71
5.10	QR Method . . . . .	73
5.10.1	Power Iteration and Deflated Matrix . . . . .	73
5.10.2	Orthogonal Iteration . . . . .	75
5.10.3	QR Method . . . . .	76
5.11	Jacobi Method . . . . .	78
5.12	Sparse Matrices . . . . .	81
<b>6</b>	<b>Numerical Linear Algebra : Krylov Space Theory</b>	<b>83</b>
6.1	Krylov Space . . . . .	84
6.2	Symmetric Positive Definite Matrix : A-Orthogonal Basis . . . . .	85
6.3	Symmetric-Positive-Definite Matrix : Conjugate Gradient Method . . . . .	86
6.4	General Nonsingular Matrix : Bi-Orthogonal Bases . . . . .	89
6.5	General Nonsingular Matrix : Bi-Conjugate Gradient Method . . . . .	90
6.6	General Nonsingular Matrix: Conjugate Gradient Square Method . . . . .	93
<b>7</b>	<b>Scientific Visualization</b>	<b>97</b>
7.1	Display System . . . . .	97
7.2	Drawing Line Segments on the Display . . . . .	98
7.3	Drawing Triangles on the Display . . . . .	99
7.4	Drawing Curves on the Display . . . . .	100
7.5	Drawing 3D objects on the Display . . . . .	101
7.6	Triangulating 3D Surfaces . . . . .	102
7.7	Giving Shade Colors to 3D objects . . . . .	105
7.8	Rotating 3D objects . . . . .	106
7.8.1	Matrix representation . . . . .	106
7.8.2	Quaternion Algebra . . . . .	108
<b>8</b>	<b>Approximating Ordinary Differential Equations</b>	<b>113</b>
8.1	Mathematical Modeling by Differential Equations . . . . .	113
8.2	Approximating Derivatives . . . . .	114
8.3	Basic Methods Approximating Ordinary Differential Equations . . . . .	116
8.4	Analysis of the Ordinary Differential Equation . . . . .	119
8.5	Convergence of Forward Euler Method . . . . .	121
8.6	Convergence of Leapfrog Method . . . . .	122

8.7	Linear Stability Domain . . . . .	124
8.8	Example : Lorentz Equation . . . . .	126
8.8.1	Linear Stability Analysis of the Fixed Points . . . . .	126
8.8.2	Numerical Simulation of Lorenz Equation . . . . .	129
<b>9</b>	<b>Approximating Poisson Equation</b>	<b>131</b>
9.0.3	Finite Difference Method . . . . .	133
9.0.4	Consistency error of the Five-Point Scheme . . . . .	136
9.0.5	Convergence error of the Five-Point Scheme . . . . .	137
9.0.6	Example . . . . .	140
<b>10</b>	<b>Rigid Body Animation</b>	<b>143</b>
10.1	Euler Equations . . . . .	145
10.2	Collision Mechanics . . . . .	147
10.2.1	Two Typical Impulses . . . . .	149
10.2.2	Kinetic Energy Dissipation . . . . .	150
10.2.3	Coulomb's Friction Law . . . . .	151
10.2.4	Non-penetration Condition . . . . .	152
10.2.5	Permissible Region of the Impulse . . . . .	152
10.2.6	An Algebraic Formula calculating the Impulse . . . . .	152
<b>11</b>	<b>Computational Fluid Dynamics</b>	<b>157</b>
11.1	Navier-Stokes Equations . . . . .	157
11.2	Navier-Stokes Equations with Constant Density and Viscosity . . . . .	159
11.3	Discretizing Time Derivative : Projection Method . . . . .	160
11.4	Discretizing the Spatial Derivatives . . . . .	161
11.5	Implementation of the Basic Fluid Solver . . . . .	164
<b>12</b>	<b>Optimizations</b>	<b>171</b>
12.1	Multi-dimensional Calculus . . . . .	171
12.2	Gradient Descent Method . . . . .	175
12.3	Nonlinear Conjugate Gradient Method . . . . .	178
12.4	Linear Programming . . . . .	179
<b>13</b>	<b>Appendices</b>	<b>187</b>
13.1	Appendix A : Gerchgorin's Circle Theorem . . . . .	187
13.2	Appendix B : Shur Polynomial Theory . . . . .	190
13.3	Appendix C : M-matrix Theory . . . . .	192
13.4	Appendix E : Polar and Spherical Coordinates . . . . .	193
13.5	Appendix F : Programming in C++ . . . . .	194
13.5.1	"Hello" Program . . . . .	195
13.5.2	Basic Data . . . . .	196

13.5.3	Function . . . . .	197
13.5.4	Logical Statement . . . . .	198
13.5.5	Loop Statement . . . . .	199
13.5.6	Memory Storage . . . . .	200
13.5.7	Pointer Variables . . . . .	202
13.5.8	Reference Variables . . . . .	205
13.5.9	Header and Source Files . . . . .	206
13.5.10	Class . . . . .	208
13.5.11	Operator Overloading . . . . .	210
13.5.12	Using the Library File . . . . .	212
13.5.13	Project : Mandelbrot Set . . . . .	215
